

WIDA MODEL Online Annual Program Rollover FAQs

Rollover Overview

On the Pearson platform, a rollover process takes place each July as the system is updated to move from one academic year to the next. This year during the rollover, the system will be down from **July 1-8, 2026**, and users will not be able to access ADAM or perform key functions in LaunchPad. The rollover process allows Pearson to configure test enhancements for the 2026-2027 year, clear out old session data and allow students to be re-added to ensure grade and school information is up to date for the new year.

Preparing for Rollover

- All MODEL Online tests for the 2025-2026 school year must be submitted by June 30, 2026. Partially completed tests cannot be resumed following the rollover.
- All student writing responses for the 2025-2026 school year must be scored in ADAM by June 30. Responses that are not scored by June 30 cannot be accessed or scored following the rollover.
- Users should download Individual Student Reports (ISRs) by June 30 for all students who will either not be re-added to LaunchPad in 2026-2027 or who will have a different identifier (sourced ID) in the upcoming academic year.

During Rollover

- Users will not be able to access ADAM or perform key LaunchPad functions, and no MODEL Online tests can be administered in TestNav.
- Reserved licenses that have not been consumed by June 30 will be returned to an available status following the rollover **if they have not yet expired**. All licenses will retain their original expiration dates.

After Rollover

- Your login credentials will remain the same, and all school orgs from 2025-2026 will remain in the system following the rollover.

- Users will not be able to see domain test status, proctor group information or assigned accommodations from prior years.
- Performance and score data from previous years can still be accessed in two ways: through **Report Assets** and via the **Performance Dashboard**.
- Prior to assigning or administering tests, users will need to add students to the platform for the 2026-2027 academic year.
 - All tests for 2026-2027 must be assigned, or reassigned, to students.
 - Accommodations will need to be assigned, or reassigned, to students. This includes students who were in the system in 2025-2026. The system will not automatically assign accommodations that were assigned to students in prior years.

Downloading Student Score Data From Prior Years

To download student score data from prior testing years, follow the steps below:

1. Log in to LaunchPad and navigate to ADAM.
2. From the ADAM home page, go to the **Reporting** menu and select **Report Assets**.
3. On the Report Assets page, select the **Files** view.
4. Select the **School Years** filter and select the desired program year (e.g., 2025-2026).
5. Select the **Report Type** filter. To download data at the district org level, select **District Roster Report (to date)** as the report type. To download data at the school org level, select **School Roster Report (to date)** as the report type.
 - Refer to the [ADAM User Guide](#) for additional information about District and School Roster Reports.
6. Sort by the **Created** date to locate the most recently posted file or files. Roster Reports are cumulative for an academic year, so the most recently posted file will include all student score data for MODEL Online tests administered during the academic year (July-June).
7. Select the three-dot **Actions** menu, then select **Download**.

Exporting Student Roster Data From Prior Years

To export the student roster data from previous testing years, follow the steps below:

1. Log in to LaunchPad and select **Users**.
2. Select the **Students** tab.
3. Select the **School Year** filter at the right of the screen and select the prior program year (to export student roster data from the 2025-2026 school year, select **2025-2026**).

4. Select the **Actions** menu at the right of the screen and select **Export Student Details**.
5. The exported file becomes available under Downloads. Select **Downloads**.
6. On the Downloads page, locate the file and download it to your device. Save it as a CSV file so that it can be easily used to re-roster students for the next school year, once student data has been updated.
 - **TIP:** Export the 2025-2026 student roster data from LaunchPad and save it to your device. Open the file and update students' grade, school and IEP/504 information as needed, and add any new students you plan to test in 2026-2027. Save it as a CSV file. Use the Data Import process described below to upload the file to LaunchPad to roster students for 2026-2027.

For 2025-2026 student test data to remain associated with the student's record after they have been re-added to LaunchPad for 2026-2027, their Identifier (Sourced ID) in 2026-2027 must be exactly the same as it was in 2025-2026. If a student's Sourced ID changes, no previous testing will be associated with the student.

Importing Students for the Next Testing Year

To import, or re-import, student data for the current or upcoming testing year, follow the steps below.

1. Log in to LaunchPad and select **Data Import**.
2. On the Data Import page, select **Upload File**.
3. The File Upload screen appears. Select **Student Users** as the **File Type**. Select the appropriate school year (e.g., 2026-2027) as the **School Year**. Under **District Org**, select the name of your MODEL Online account.
4. Either download and complete the Students Template CSV or update the data file downloaded from LaunchPad from the previous year (see instructions above). Refer to the [LaunchPad User Guide](#) for additional information about completing the Students Template CSV.
 - **TIP:** The Export Student Details file layout exactly matches the student data file import specification, allowing for seamless re-upload. To re-import students from 2025-2026 for 2026-2027, export Student Details from the prior testing year as described above. Update students' grade, school and IEP/504 information as needed, and add any new students you plan to test in 2026-2027. Save it as a CSV file and upload the file to LaunchPad to re-roster students for 2026-2027.

5. Select **Choose File** and upload the completed Students File. Select **Upload File** to complete the process.
 - **TIP:** If you have questions about loading students into LaunchPad, contact [WIDA MODEL Customer Support](#). Schedule dedicated time with a [Pearson Technical Engineer](#) for additional support if needed.
